RJC Architects, a San Diego architecture and planning firm, announced it has been awarded a \$50 million contract to design and build the third phase of the Force Intelligence Operations Center at the Marine Corps Base, Camp Pendleton.

RJC, in partnership with Straub Construction Inc. of Bonsall, will demolish some existing structures and provide approximately 146,000 square feet of new facilities for the Radio, Intelligence and 9th Communication Battalions.

Constructed within the headquarters area of Camp Pendleton, the design/build project includes a communications headquarters building and training facility with classrooms, martial arts training area, men's and women's shower facilities and administrative offices; a communications CEM facility for five platoons and support personnel for maintaining and storing electronic communications equipment; an intelligence academic instruction facility with two multi-purpose classrooms with movable partitions and a language lab; and an intelligence armory facility to house weapons and gear.

Juan Silva is the project manager for RJC. Design consultants include **CTE Civil Engineering, SMR Structural Engineers, EPI Electrical Engineers, DSE Mechanical Engineering, Kathleen Killman Interior Design** and **GMH Architects** for the armory design.

In addition to the Force Intelligence Operations Center, RJC also is currently designing the \$54 million Marine Corps Special Operations Headquarters and \$15 million lodging facility, both at Camp Pendleton.
